Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name:S.Blessika

RegNo:192525251

Course Code:CSA1522

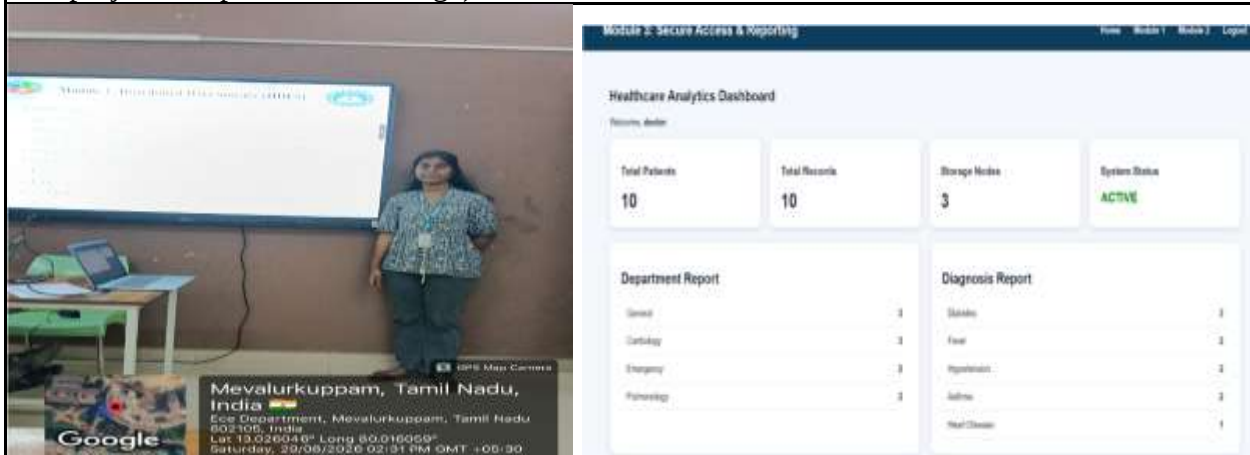

Slot: C

Course Name : Cloud Computing And Big Data Analytics

Course Faculty: Dr. P.Rajaram

Project Title: HDFS-BASED LARGE -SCALE HEALTHCARE DATA STORAGE AND RETRIVEAL SYSTEM

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

Project Description:

MODULE 3 :

data stored in the HDFS system. It creates indexes and manages metadata using information such as Patient ID, date, record type, and file location.

When a user searches for a specific record, the indexing system helps locate the required data without searching through the entire dataset. The retrieval engine then accesses the required information from the appropriate storage location. This module reduces search time, improves retrieval efficiency, and helps authorized healthcare professionals access the required information quickly. This module is particularly useful for doctors, hospital staff, researchers, and administrators who need quick access to healthcare information. By combining data indexing, metadata management, search processing, and efficient retrieval, Module 2 improves the accessibility and usability of large-scale healthcare data stored in HDFS.
